"I am responsible for designing,
developing, and maintaining responsive
websites and web applications using
HTML, CSS, and JavaScript to enhance user
experience and interface."

I am a front-end web developer with a solid foundation in HTML, CSS, JavaScript, and Bootstrap. I have a strong understanding of UI/UX principles and have applied basic design concepts to create intuitive, user-friendly websites. Additionally, I am familiar with jQuery and am currently learning SEO best practices to enhance site visibility. Although I am relatively new to the field, I have worked on several personal projects, building responsive websites that adapt well across different screen sizes and devices. I am committed to continuous improvement by following industry trends and participating in online tutorials and coding challenges. I am eager to apply my skills in a real-world setting, create high-quality websites, and deliver excellent user experiences.
