201-14 - 2023
Aptech Garden Centre

ABOUT ME

I started my career in software engineering at Aptech Garden Centre, where I learned the basics of programming and web development. I have 3 months of experience as a web developer, where I worked on real-world projects, and 1 year of freelancing experience in sales, which helped me build strong communication and client-handling skills. Right now, I'm learning marketing to grow my skills further and combine it with my experience in development and sales. I'm excited to keep learning and contribute to teams that encourage creativity and growth.

WORK EXPERIENCE

JUNION WEB DEVELOPER
Mitsol Tech (Apr-24 -Aug-24)

During my time at Mitsol Tech as a Junior Web Developer, I specialized in utilizing platforms like WordPress and mastering languages such as Angular for frontend and backend development. Additionally, I worked extensively with fundamental web languages like HTML, CSS, and JavaScript. This experience allowed me to develop a strong foundation in web development and expand my skill set significantly

FREELANCE SALES - 1 YEAR

I worked for 1 year providing sales services to clients, building strong relationships and offering solutions based on their needs. I helped clients grow their communities and achieve their goals through customized solutions.

PROJECT EXPERIENCE

E-COMMERCE WEB APPLICATION
Project Overview

Jenny, a budding entrepreneur working from home, has successfully built a growing business in cosmetics and imitation jewelry. Initially, she relied on word-of-mouth from friends and family to gain customers. As her business rapidly expands, she now wants to take it to the next level by creating a strong online presence. To achieve this, she is developing an e-commerce website using PHP, Laravel, and a frontend language. This project will help Jenny reach more customers, manage her business efficiently, and enhance her brand visibility.

DIGITAL SURVEY PORTAL: INSPIRING ENVIRONMENTAL ACTION
Project Overview

An educational institution is promoting environmental awareness by hosting free seminars and interactive sessions for students. To reduce paper waste, they've asked us to build a digital survey portal. The goal is to create an easy-to-use platform where students can participate in surveys, track their progress, and reward top performers. This initiative aims to inspire environmental action among students. We will use ASP.NET Core and SQL to develop the platform.
